The Lewis/Mola PH2000 Poultry Harvester has been performing in the field for over two and one half years. Over that time period, we have developed important enhancements to increase reliability, to lower maintenance costs, to improve bird quality, and to reduce the number of personnel required to effectively operate the machine.

When compared with mechanical harvesters that rely on “fingered heads”, the Lewis/Mola PH2000 has been found to catch broilers 30% faster, to cause fewer DOA’S and to cost 30% less to maintain. While the PH2000 is not the cheapest machine on the market, it is, by far, the most cost effective and the most reliable mechanical harvester.

In terms of cost, economies of scale have allowed us to negotiate significant cost savings on parts without lowering quality and our manufacturing team’s experience in assembling the PH2000 has allowed us to increase productivity while improving quality. **We are passing 100% of these savings on to our customers. Effective immediately, the new purchase price for the PH2000 is \$200,000.**

We look forward to building a long term relationship with you by successfully fulfilling your “on the job... in the field” mechanical harvesting needs.

Sincerely,

Larry Rutledge

P.S. This price includes remote control operation and our improved weighing system that insures proper count in each cage compartment.
